

TWO PCAPS FOR UISGCON CTF IN 2018

Source: <https://www.malware-traffic-analysis.net/2018/UISGCON/index.html>

FIRST PCAP:

- [UISGCON-traffic-analysis-task-pcap-1-of-2.pcap](#)

LAN SEGMENT PROPERTIES:

- IP range: **172.16.1.0/24** (172.16.1.0 through 172.16.1.255)
- Gateway IP: **172.16.1.1**
- Broadcast IP: **172.16.1.255**
- Domain Controller (DC): **Maricheika-DC** at 172.16.1.3
- Domain: **maricheika.net**

MY SUGGESTED TASKS:

- State the time and date of this infection.
- Determine the IP address of the infected Windows client.
- Determine the host name of the infected Windows client.
- Determine the MAC address of the infected Windows client.
- Determine the Windows user account name used on the infected Windows client.
- Determine the SHA256 hash of the Word document downloaded by the victim.
- Determine the type of malware used in the initial infection.
- Determine the public IP address of the infected Windows client.

MY ANSWERS:

- Time and date of the infection: **2018-10-01 at 18:38 UTC**
- IP address of the infected Windows client: **172.16.1.125**
- Host name of the infected Windows client: **ANATOLIY-PC**
- MAC address of the infected Windows client: **b8:97:fa:74:de:c0**
- Windows user account name used on the infected Windows client: **anatoliy.demchuk**
- SHA256 hash of the Word document downloaded by the victim: [e2b0c9f57dcf08c0e14456f5cb54d8e50714c8e7a3a88cf818896dc8ba1dba51](#)
- Type of malware used in the initial infection: **Hancitor (also known as Chanitor or Tordal)**
- Public IP address of the infected Windows client: **31.44.188.95**

TWO PCAPS FOR UISGCON CTF IN 2018

SECOND PCAP:

- [UISGCON-traffic-analysis-task-pcap-2-of-2.pcap](#)

LAN SEGMENT PROPERTIES:

- IP range: **10.1.75.0/24** (10.1.75.0 through 10.1.75.255)
- Gateway IP: **10.1.75.1**
- Broadcast IP: **10.1.75.255**
- Domain Controller (DC): **PixelShine-DC** at 10.1.75.4
- Domain: **pixelshine.net**

MY SUGGESTED TASKS:

- State the time and date of this infection.
- Determine the IP address of the infected Windows client.
- Determine the host name of the infected Windows client.
- Determine the MAC address of the infected Windows client.
- Determine the Windows user account name used on the infected Windows client.
- Determine the SHA256 hash of the Word document downloaded by the victim.
- Determine the SHA256 hash of the first malware binary sent to the infected Windows client.
- Determine the time the Domain Controller (DC) at 10.1.75.4 became infected.
- Determine the SHA256 hash of the second malware binary sent to the infected Windows client (same file retrieved as radiance.png and table.png).
- What are the two file hashes for executables you can retrieve from the SMB traffic using Wireshark?
- Determine the two families of malware the Windows client was infected with.
- Determine the one family of malware the DC was infected with.
- Determine the public IP address of the infected Windows client

MY ANSWERS:

- Time and date of the infection: **2018-10-01 at 18:55 UTC**
- IP address of the infected Windows client: **10.1.75.167**
- Host name of the infected Windows client: **RIGSBY-WIN-PC**
- MAC address of the infected Windows client: **00:1f:cf:8b:32:9e**

TWO PCAPS FOR UISGCON CTF IN 2018

- Windows user account name used on the infected Windows client: **judson.rigsby**
- SHA256 hash of Word document downloaded by the victim:
[1112203340b2d66f15b09046af6e776af6604343c1e733fe419fdf86f851caa3](#)
- SHA256 hash of first malware binary sent to the infected Windows client:
[0d7a4650cdc13d9217edb05f5b5c2c5528f8984dbbe3fbc85f4a48ae51846cc3](#)
- Time the Domain Controller (DC) at 10.1.75.4 became infected: **2018-10-01 at 19:02 UTC**
- SHA256 hash of second malware binary sent to infected Windows client (radiance.png and table.png):
[0dc9d82d2f9d9ae27a1cb6d64ec7ab73bcee16d327027dba1273cbcc33849f9f](#)
- Two file hashes in the SMB traffic:
[28c33a9676f04274b2868c1a2c092503a57d38833f0f8b964d55458623b82b6e](#)
and
[cf99990bee6c378cbf56239b3cc88276eec348d82740f84e9d5c343751f82560](#)
- Two families of malware the Windows client was infected with: **Emotet and Trickbot**
- One family of malware the DC was infected with: **Trickbot**
- Public IP address of the infected Windows client: **109.238.74.213**
